## The 3D Solution for Stabilizing Mine Haul Roads

### Stable Roads Save You Money

The GEOWEB® 3D confinement system is an economical and fast to deploy load support solution for mine haul roads that delivers: **Faster cycle times. Significantly reduced road maintenance. Minimal rutting and wash-boarding.**

The GEOWEB system can provide a **3% rolling resistance** with little to no maintenance compared to the typical 8% rate at which most mine roads operate **resulting in reduced fuel consumption.**

### Other GEOWEB Benefits in Mining Operations:

- Reduces mechanical wear on haul trucks
- Improves tire life, less tire damage, reduces tire expense
- Fuel savings & safer operating conditions for haul trucks
- Reduces cross section depth for handling heavy loads for more material savings
- Easy to transport and install with local crews and without heavy equipment
