PORTABLE CONSTRUCTION MATS

Transmission Line Access Over Soft Ground Keeps Line Trucks Moving

Access Challenges

Building access roads over extremely wet areas is a common challenge for energy companies as they install or service transmission lines. The ability to deploy mats quickly, easily and safely to bridge these soft areas is key to keeping projects on schedule.

Easy, Safe Installation No Heavy Equipment Required

GEOTERRA mats are strong, yet light-weight, making them easy to handle and install, even in difficult-to-access sites. No heavy lifting equipment is required so they are safer for workers.

GEOTERRA Mats can be configured to fit any site requirement. GEOTERRA sections are typically placed over a high strength geotextile.

GEOTERRA Advantages Compared to Alternative Mats

More Economical:

A fraction of the cost of other mat systems (Composite HDPE, Steel, Fiberglass, and Timber).

Safer:

No heavy equipment required to install, eliminates need to mobilize special handling equipment, and potential for worker injury.

Lower Life-Cycle Cost:

Tough HDPE material can be used and reused several times, reducing the mat system's life-cycle cost.
